

AVERY JOHN

ASPIRING DATA SCIENTIST

averyjohntx@gmail.com | averymj.github.io

Highly motivated individual pursuing a master's degree in data science. Skilled in data cleaning, transformation and visualization. Experienced in machine learning, as well as prediction modeling and communicating data insights. Eager to grow my career as a data scientist, solving complex business problems using meticulous data-driven approaches.

AREA OF EXPERTISE

Programming (Python, R, SQL, SAS)	Machine Learning	Data Visualization & Interpretation
Exploratory Data Analysis (EDA)	Statistical Analysis	Programming Software (Jupyter Notebook, Excel, Git)

PROFESSIONAL EXPERIENCE

Marketing Intern - Content Creation & Analytics, Coursebite May 2025 - Aug 2025

- Analyzed Instagram performance metrics to identify trends and optimize content strategy
- Presented insights to stakeholders to support campaign optimization and cross-functional planning

YouTube Marketing Intern, English Language & Literature Online School Sep 2024 - Oct 2024

- Analyzed daily YouTube content using performance metrics (CTR, retention, watchtime)
- Applied SEO and analytics insights to improve content discoverability and channel growth strategy

Video Marketing Intern, Castle Placement May 2022 - Aug 2022

- Collaborated with cross-functional teams to translate engagement data into actionable content strategy recommendations
- Used performance insights to inform content decisions in financial services marketing campaigns

EDUCATION

M.S. Data Science Jan 2026 - Aug 2027

Southern Methodist University

- AI & Machine Learning

B.A. Creative Media Production Aug 2019 - May 2023

University of Oklahoma

PROJECTS

NYC Yellow Taxi Tipping Prediction (Group Project)

- Built regression models to predict taxi tip amounts using structured ride data
- Applied data cleaning in R to improve model performance
- Identified key behavioral drivers of tipping and communicated insights through visual analysis

House Prices Prediction (Group Project)

- Developed regression models to predict housing prices using structured housing data from Kaggle
- Engineered features and preprocessed data to improve model accuracy
- Evaluated model performance using statistical diagnostics and error metrics

Employee Attrition Case Study

- Built classification models to predict employee attrition using hypothetical workforce data
- Conducted feature selection and exploratory data analysis to identify key drivers of turnover
- Compared model performance and translated findings into retention insights
